PROFILE

Self-taught web developer and digital entrepreneur based in Osun, and Lagos, Nigeria, with an active client base spanning Nigerian cities (Osun, Lagos, Abuja). Specializes in identifying local businesses without a web presence, building polished, brand-matched demo websites as pitch tools, and converting them into paying clients. Currently sharpening business and pitching skills as a member of Tech4Africans Cohort 8.

SKILLS

- Front-end development: HTML5, CSS3, JavaScript — self-contained, framework-free builds
- Brand-driven UI design: logo-based color theming, responsive layouts, animated hero sections
- Client acquisition: market recon, no-website lead sourcing, cold outreach, pitch-to-close conversion
- Rapid prototyping: single-file demo sites built as live sales assets
- Business development & entrepreneurship (Tech4Africans Cohort 8 training)

EXPERIENCE

Freelance Web Developer & Digital Entrepreneur | Self-Employed

Ongoing

- Built and operate a signature pitch model: scout local businesses without a website, design a polished single-file HTML demo matched to their brand identity, then pitch it directly to convert into a paying client.
- Delivered demo and production sites for clients across Osogbo, Lagos, and Abuja, including restaurants, boutiques, and a ministry website.
- Built a full brand-matched demo site for Abuja 24Hours Boutique (Wuse 2), using a hot pink/black/white palette and a live West Africa Time clock, sourced directly from a customer's public complaint about the business lacking a website.
- Designed and delivered a dual-location demo site for KD's Place Restaurant & Bakery (Ikorodu), featuring an animated hero section and a jollof-red/charcoal palette.
- Currently developing a website for Freedom Power Packed Anointed Ministry (Ikorodu, Lagos), incorporating the ministry's logo, color palette, and service schedule.

TRAINING & CERTIFICATIONS

Tech4Africans Program | Cohort 8

Current

- Selected participant developing entrepreneurial, business, and technical pitching skills alongside a growing freelance web development practice.

Web Development Certification | TS Academy

- Completed structured training in web development fundamentals, building on and reinforcing an existing self-taught practice.

SELECTED PROJECTS

- BJ Diners (Osogbo) — foundational demo site build; established core workflow of location-based recon, logo-driven color theming, and iterative client-ready refinement.
- Recipe card webpage recreation — single-file HTML/CSS build focused on precise visual fidelity.

INTERESTS

Music theory and transcription (solfa notation, key transposition), gaming, and Marvel.
